EDUCATION

Northeastern University, Boston, MA

Expected December 2027

Master of Science in Computer Science | GPA: 4.0/4.0

Teaching Assistant, CS 3200: Introduction to Databases, Fall 2026

Coursework: Algorithms, Cloud Computing, Foundations of Artificial Intelligence, Database Management Systems, Programming Design Paradigms

Visvesvaraya National Institute of Technology, Nagpur, India

September 2020 – May 2024

Bachelor of Technology in Electrical and Electronics Engineering

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, C++, Bash

Frontend: React, Next.js, Relay, HTML, CSS | **Backend/APIs:** Node.js, GraphQL, Prisma, FastAPI, REST APIs

Databases: PostgreSQL (Postgres), MySQL, MongoDB | **Testing/DevEx:** Jest, React Testing Library, JUnit, Code Review, Git, Docker, CI/CD, GitHub Actions, Linux

Cloud/AI: AWS, LLM APIs, Agent Workflows, Prompt Engineering

PROJECTS

School Operations Platform | TypeScript, React, Node.js, GraphQL, Prisma, Postgres

Sep 2026 – Present

- Building a full-stack school operations platform with teacher, student, and family workflows for classes, schedules, attendance, assignments, assessments, and academic progress.
- Designing Node.js GraphQL APIs backed by Prisma and PostgreSQL; using Relay for typed data fetching, pagination, caching, and client-state synchronization across React/Next.js interfaces.
- Implementing role-based access, input validation, responsive UI flows, Jest/React Testing Library coverage, Dockerized development, and CI checks to maintain a high bar for correctness and developer experience.

Event Processing Pipeline | Python, Kafka, PostgreSQL, FastAPI, Docker

May 2026 – Present

- Built a Dockerized event-processing pipeline with Kafka producers/consumers, PostgreSQL persistence, and FastAPI endpoints for querying processed events and aggregate metrics.
- Designed indexed relational schemas, validation, structured logging, and reproducible local workflows to debug failures and reason about throughput, ordering, and processing state.

Agentic Shopping Defense | Python, LLM APIs, Multi-Agent Systems, Streamlit

May 2026

- Built a multi-agent recommendation system coordinating specialized LLM agents for product analysis, verification, and decision-making under conflicting or malicious inputs.
- Designed agent orchestration, structured inter-agent state exchange, adversarial evaluation workflows, and a working Streamlit demo; won **1st Place Overall** at AGI House Multi-Agent Orchestration Build Day.

Java Calendar Application | Java, MVC, Swing, JUnit, Git

Oct 2025 – Dec 2025

- Built an MVC calendar application with CLI and Swing interfaces supporting 100+ events, recurring schedules, multiple calendars, time zones, validation, and duplicate handling.
- Added analytics for 10+ scheduling metrics and JUnit tests reaching approximately 95% instruction and 75% branch coverage across core application logic.

EXPERIENCE

Software Engineering Intern, AIT Global Inc.

January 2025 – June 2025

Pune, India

- Built and debugged a Python/FastAPI inference and field-extraction service across approximately 50 financial and loan documents and 8 target fields, improving field-level F1 by approximately 8% through preprocessing, validation, error triage, and failure analysis.
- Engineered a Python ingestion pipeline using PyPDF2 and BeautifulSoup to clean, validate, and structure data from 100+ reports, documents, and webpages, reducing manual preparation time by approximately 60%.
- Deployed model-backed APIs on AWS SageMaker with Docker and CI/CD, reducing release time from approximately 30 minutes to 10 minutes and improving reproducibility across releases.
